FPLI = 2004 Florida Price Level Index

LLSIL = 2004 Lower Living Standard Income Level

The Annual 2004 LLSIL for a family of 3 for Florida is \$22,570 or \$10.85/hour; selected by state policy as the indicator for "self-sufficiency" wage and used for the denominator in calculating the Red and Green Report wage rate measures.

Calculated by multiplying the LLSIL for a Family of 3 by the FPLI for the region.

FPLI = 2004 Florida Price Level Index

LLSIL = 2004 Lower Living Standard Income Level

The Annual 2004 LLSIL for a family of 3 for Florida is \$22,570 or \$10.85/hour; selected by state policy as the indicator for "self-sufficiency" wage and use for the denominator in calculating the Red and Green Report wage rate measures.

Calculated by multiplying the LLSIL for a Family of 3 by the FPLI for the region.

FPLI = 2004 Florida Price Level Index  
 LLSIL = 2004 Lower Living Standard Income Level  
 The Annual 2004 LLSIL for a family of 3 for Florida is \$22,570 or \$10.85/hour;  
 selected by state policy as the indicator for "self-sufficiency" wage and use for the  
 denominator in calculating the Red and Green Report wage rate measures.  
 Calculated by multiplying the LLSIL for a Family of 3 by the FPLI for the region.

FPLI = 2004 Florida Price Level Index

LLSIL = 2004 Lower Living Standard Income Level

The Annual 2004 LLSIL for a family of 3 for Florida is \$22,570 or \$10.85/hour; selected by state policy as the indicator for "self-sufficiency" wage and use for the denominator in calculating the Red and Green Report wage rate measures.

Calculated by multiplying the LLSIL for a Family of 3 by the FPLI for the region.

**The American Customer Satisfaction Index –  
 The Voice of the Nation’s Consumer**

Established in 1994, the American Customer Satisfaction Index (ACSI) is a uniform and independent measure of household consumption experience.

A powerful economic indicator, the ACSI tracks trends in customer satisfaction and provides valuable benchmarking insights of the consumer economy for companies, industry trade associations, and government agencies.

The ACSI is produced through a partnership of the University of Michigan Business School, the American Society for Quality (ASQ), and the international consulting firm, CFI Group.

The ACSI reports scores on a 0-100 scale at the national level. It measures 7 economic sectors, 35 industries (including e-commerce), 190 companies, and Federal or local government agencies. In addition to the company-level satisfaction scores, the ACSI produces scores for the causes and consequences of customer satisfaction, and their relationships.

The ACSI is based on econometric modeling of data obtained from telephone interviews with customers – the actual users of products and services that make up a substantial part of the gross domestic product.

The measured companies, industries, and sectors are broadly representative of the U.S. economy serving American households.

Companies based outside of the United States with major market shares in several industries are also included in the ACSI. Smaller companies are grouped together in an “All Other” category.

Data are collected at the individual customer level, with scores for a company’s customers aggregated to produce company-level results.

The score for a particular industry consists of an average of its company scores, weighted by the revenues of each company.

Sector scores consist of industry scores, weighted by industry revenues.

The national ACSI is comprised of sector scores weighted by each sector’s contribution to the GDP.

**For more information:** [http://www.theacsi.org/what\\_it\\_measures.htm](http://www.theacsi.org/what_it_measures.htm)

The ACSI weighted score usually yields scores slightly less than the average.

**The American Customer Satisfaction Index –  
 The Voice of the Nation's Consumer**

The ACSI weighted score usually yields scores slightly less than the average.

Established in 1994, the American Customer Satisfaction Index (ACSI) is a uniform and independent measure of household consumption experience. A powerful economic indicator, the ACSI tracks trends in customer satisfaction and provides valuable benchmarking insights of the consumer economy for companies, industry trade associations, and government agencies. The ACSI is produced through a partnership of the University of Michigan Business School, the American Society for Quality (ASQ), and the international consulting firm, CFI Group. The ACSI reports scores on a 0-100 scale at the national level. It measures 7 economic sectors, 35 industries (including e-commerce), 190 companies, and Federal or local government agencies. In addition to the company-level satisfaction scores, the ACSI produces scores for the causes and consequences of customer satisfaction, and their relationships. The ACSI is based on econometric modeling of data obtained from telephone interviews with customers – the actual users of products and services that make up a substantial part of the gross domestic product. The measured companies, industries, and sectors are broadly representative of the U.S. economy serving American households. Companies based outside of the United States with major market shares in several industries are also included in the ACSI. Smaller companies are grouped together in an "All Other" category. Data are collected at the individual customer level, with scores for a company's customers aggregated to produce company-level results. The score for a particular industry consists of an average of its company scores, weighted by the revenues of each company. Sector scores consist of industry scores, weighted by industry revenues. The national ACSI is comprised of sector scores weighted by each sector's contribution to the GDP.
